Vassilis Papataxiarhis, Intellia ICT, Greece

Break

18.30-20.00
(EDU HALL)

Augmented Reality Workshop

Vassilis Papataxiarhis, Intellia ICT, Greece

20:00 End of Spring School

Open science technologies Acceleration for a new generation of Student entrepreneurship, Innovation and Sustainable development

OASIS is an initiative of four HEIs, 1x Research Center, 1x pan-EU network of institutions and 2x enterprises (startup and well established). It aims to develop and share support capabilities in the area of **OPEN SCIENCE (OS)** driving EU's digital transformation and sustainable development.

The project is about facilitating the adoption of **OS** technologies in education through practical applications, training and mentoring activities for managing real educational and labor oriented problems with a view to increase openness and not closed intellectual property.

OASIS aims to provide several well designed actions that boost students' appreciation of Open Science entrepreneurship disciplines and professions and also their understanding of sustainable solutions that address Open Science challenges of the 21st century.

"When we are looking to the future, we envision universities without boundaries."
